Tor: Ip is blocked for the tor browser download but can be accessible to load it through brave

Procedure to report an incident

) How to Report an Incident to CERT-In

1. Choose Your Reporting Method

- o **Email:** Send details to incident@cert-in.org.in
- o **Phone:** Call the Helpdesk at **+91-1800-11-4949**
- o **Fax:** Send to **+91-1800-11-6969**
- o You can also use the <https://www.cert-in.org.in/SecurityIncident.jsp>

2. Report Within 6 Hours

- o If the incident involves data breaches, system compromise, or threats to human safety, report it within **6 hours** of detection

3. Include Key Information Try to provide:

- o Time of occurrence
- o Affected systems or networks
- o Symptoms observed
- o Security measures in place
- o Actions taken to contain or fix the issue

4. CERT-In Will Review

- o They'll verify the report, assign a tracking number, and may contact you for more details
- o A designated team will assist with:
 - o **Identification** of the incident
 - o **Containment** to limit damage
 - o **Eradication** of the threat
 - o **Recovery** to restore systems

5. Follow Up

- You may be asked to provide updates or additional technical data
- CERT-In offers guidance but does **not** send personnel onsite

ii) procedure to report vulnerability:

Home - Responsible Vulnerability Disclosure and Coordination Policy

Responsible Vulnerability Disclosure and Coordination Policy

1. Introduction

Responsible Vulnerability Disclosure and Coordination refers to the process of collection, analysis, mitigation coordination with researchers/finders and vendors leading to the public disclosure of newly identified cybersecurity vulnerabilities. The purpose of Responsible Vulnerability Disclosure and Coordination is to ensure that affected vendors/OEMs get sufficient time to remediate the vulnerability.

Indian Computer Emergency Response Team (CERT-In) collaborates with researchers, cybersecurity organizations, academic institutions, vendors/OEMs, and CERT's all over the world on handling of reported vulnerabilities. In this direction, CERT-In has formulated this Responsible Vulnerability Disclosure and Coordination Policy with an aim to strengthen trust in "Digital India", "Make in India" as well as to encourage responsible vulnerability research in the Country.

The policy outlines the process of vulnerability reporting to CERT-In and also provides details as to how the information provided to CERT-In will be handled and shared.

2. Reporting vulnerabilities to CERT-In

Security vulnerabilities in any product can be sent to us via email at **vdisclose@cert-in.org.in**. CERT-In accepts PGP Encrypted emails and attachments. The details of the public key are hereunder:

Email ID: **vdisclose@cert-in.org.in**
 Key ID: **0x3B4E082C**
 Key Type: RSA
 Expires Date: 2026-12-31
 Key Size: 4096/4096
 Fingerprint: 6927 2217 D8D4 0208 6B1C 23E9 CE29 EA67 3B4E 082C
 Helpdesk: +91-1800-11-4949 (Toll Free)
 Fax: +91-1800-11-6969

Acknowledgement will be sent within 72 working hours upon receipt of the vulnerability information by CERT-In.

Vulnerability Reporting Form

3. Details expected in vulnerability reports

In order to examine and validate the vulnerability, CERT-In will look forward to certain details as indicated below:

- The product(s) affected
- The exact software version or model affected;
- Vendor details
- Description of the vulnerability along with concise steps to reproduce the reported vulnerability along with supporting evidences such as:
 - Proof of concept (PoC) and/or
 - Code sample and/or

Experiment 1: Secure browser by following settings

i) trusted sited/block sites

The screenshot shows the Brave browser settings page, specifically the 'Site and Shields Settings' section. The left sidebar lists various settings categories, with 'Privacy and security' selected. The main content area displays the following settings:

- Recent activity:** No recently changed permissions. A link to 'View permissions and data stored across sites' is provided.
- Shields settings:** Shields status is 'On', indicating that shields can block trackers, ads, and fingerprinting.
- Permissions:**
 - Location:** Sites can ask for your location.
 - Camera:** Sites can ask to use your camera.
 - Microphone:** Sites can ask to use your microphone.
 - Notifications:** Collapse unwanted requests (recommended).
- Additional permissions:** A dropdown menu showing 'JavaScript' as the only active permission.
- Content:**
 - Block cookies:** Third-party cookies are blocked.
